

Report

Of

**DATA-DRIVEN INFLUENCER MARKETING AND DIGITAL
CAMPAIGN MANAGEMENT IN THE EDTECH INDUSTRY**

Submitted

To

School of Computer Science and Engineering

IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement of degree of

B.Tech CSE

By

Roll Number of Student: 2410031584

Name of Student: **PRAGYA DOKANIA**

Batch: **2024-2028**

CANDIDATE'S DECLARATION

I, **Pragya Dokania**, do hereby declare that the internship report titled “**Data-Driven Influencer Marketing and Digital Campaign Management in the EdTech Industry**” has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in CSE. All the references have been quoted and I have not taken as such any material from any other source. I affirm to you that this report is my own and has not been submitted to any other institute for any degree/diploma requirement and further I shall be solely responsible for any kind of copyright violation in this regard.

Signature

Student Name: Pragya Dokania

Roll No.: 2410031584

ACKNOWLEDGEMENT

I am using this opportunity to express my gratitude to everyone who supported me throughout the Internship Program at Elite Creators Hub (ECH). I am thankful for their aspiring guidance, invaluable constructive criticism, and friendly advice during this work. I am sincerely grateful to them for sharing their truthful and illuminating views on a number of issues related to this work.

I would specifically like to thank Mr. Ayush Khandelwal, Director and my mentor at Elite Creators Hub, and the wider team at ECH for involving me in real EdTech influencer marketing campaigns and for their continuous support throughout the internship.

I am also grateful to the School of Computer Science and Engineering, IILM University, Greater Noida, for their academic support during the preparation of this report.

I express my gratitude to my parents for their blessings.

Signature

Student Name: Pragya Dokania

INTERNSHIP COMPLETION CERTIFICATE

Internship Completion Letter

Date: 02/09/2026

This is to certify that **Ms. Pragya Dokania**, a student of **B.Tech [CSE/AIML]**, has successfully completed her internship at **Elite Creators Hub (ECH)** as a **Digital Marketing & Influencer Campaign Management Intern**.

During her internship, she worked on **“Data-Driven Influencer Marketing and Digital Campaign Management in the EdTech Industry”** and gained practical experience in creator management, campaign coordination, data tracking, and digital marketing.

We appreciate her contribution and wish her success in her future endeavors.

4. PROJECT DESCRIPTION

4.1 Introduction

As part of the curriculum for the Bachelor of Technology programme in Computer Science and Engineering at IILM University, students are required to undergo a mandatory internship to gain first-hand exposure to a professional work environment. This internship was undertaken at Elite Creators Hub (ECH), an EdTech-focused influencer marketing agency, in the domain of digital marketing, influencer marketing, and creator management — rather than in a conventional software development role.

Although the internship was not centred on writing software or building machine learning models, it involved substantial work with structured data, digital platforms, performance-based decision-making, and process coordination — all of which connect meaningfully to a technical education. Influencer marketing itself is an increasingly data-driven and technology-enabled field, relying on analytics, engagement metrics, and (increasingly) AI-assisted tools for creator discovery and campaign optimisation. This report documents the internship experience from both a marketing-operations perspective and an analytical perspective appropriate to a CSE student.

Organisation: Elite Creators Hub (ECH)

Domain of Work: Influencer Marketing, Creator Management, Account Management, Campaign Execution

Duration of Internship: 1st January 2026 to 1st September 2026

Mode of Internship: Remote

The purpose of the internship was to gain practical, industry-level exposure to how digital marketing campaigns are conceptualised, planned, and executed in a real commercial setting, with a specific focus on the influencer marketing and creator economy space, and to understand how data relating to creators, campaigns, and commercials is organised and used to support decision-making in a fast-paced digital business.

The intern's responsibilities spanned the full lifecycle of campaign execution, summarised in Table 4.2 and elaborated stage-by-stage in Section 4.8 (Methodology).

Table 4.2: Summary of Key Responsibilities

Responsibility Area	Key Activity
Account Management	Managing brand accounts and campaign requirements
Creator Discovery	Researching relevant creators for campaigns
Creator Evaluation	Shortlisting based on niche, audience, engagement, reach

Responsibility Area	Key Activity
Commercial Negotiation	Negotiating creator rates and deliverables
Creator Locking	Finalising creators for campaigns
Brand Coordination	Communicating between brand and creators
Campaign Execution	Managing multiple simultaneous campaigns
Deliverable Tracking	Tracking live links and content status
Payment Coordination	Tracking commercials, fees, and payouts
Data Management	Maintaining campaign data in Google Sheets

4.2 Organization Profile

Elite Creators Hub (ECH) is an influencer marketing agency that works at the intersection of brands and social media content creators, with a particular focus on the EdTech (Education Technology) sector. The agency positions itself as a bridge between brands seeking to reach specific student and young-adult audiences and a curated network of creators capable of producing relevant, engaging content for those audiences.

Official Website: elitecreatorshub.com

Elite Creators Hub has, over its operating history, worked with 10+ brands, executed 50+ campaigns, and collaborated with a network of 200+ creators.

ECH functions as an influencer marketing and creator management agency. Its core business involves identifying brand marketing objectives, matching those objectives with suitable creators from its network, negotiating commercial terms on behalf of both parties, and managing the execution of sponsored content campaigns from planning through to performance tracking and reporting.

A significant share of ECH's client base is drawn from the EdTech sector — organisations offering online and offline educational products, competitive examination coaching, and upskilling courses. EdTech brands increasingly rely on influencer marketing because their target audience (students and exam aspirants) is highly active on social media and often trusts creator recommendations over traditional advertising. One of the brands ECH has worked with in this space is ALLEN Career Institute, a well-known name in competitive examination coaching.

Table 4.1: Services Offered by Elite Creators Hub

Service Area	Description
Creator Sourcing &	Identifying relevant creators based on brand niche, audience

Service Area	Description
Research	demographics, and content style.
Creator Evaluation & Shortlisting	Assessing creators on engagement rate, reach, audience relevance, and content quality.
Commercial Negotiation	Negotiating rates and deliverables with creators on behalf of client brands.
Campaign Management	End-to-end coordination of campaign execution, from briefing to publishing.
Deliverable & Performance Tracking	Tracking live links, content status, and basic performance indicators.
Payment & Payout Coordination	Managing and tracking creator payouts, agency fees, and related commercial data.

A simplified representation of the organisational structure relevant to the intern's role is shown in Figure 4.1.

Reporting Manager / Team Lead: Ayush Khandelwal, Director

Leadership / Founders	Brand Partnerships	Account & Campaign Management (Intern)	Creator Relations
-----------------------	--------------------	--	-------------------

Figure 4.1: Organisational Structure of Elite Creators Hub (Simplified)

4.3 Problem Statement

Brands in the EdTech sector need to reach large numbers of students and exam aspirants efficiently, but the creator economy in which they must operate is large, fragmented, and difficult to navigate manually. Thousands of creators exist across platforms with widely varying niches, audience profiles, engagement levels, and commercial rates, and there is no single standardised source that tells a brand which creator will deliver the best outcome for a given budget and objective.

This creates a practical, operational problem that agencies such as Elite Creators Hub are built to solve: how to consistently identify the right creators for a brand's requirement, negotiate fair commercials, coordinate execution across multiple simultaneous campaigns, and track performance and payments — all while keeping the underlying data (on creators, campaigns, and commercials) organised enough to support quick, reliable decisions rather than ad-hoc guesswork.

The internship was framed around addressing this problem at an operational level for EdTech client campaigns — specifically, supporting structured creator discovery and evaluation, systematic campaign execution, and consistent data management, so that brand objectives could be met efficiently despite the scale and fragmentation of the underlying creator ecosystem.

4.4 Project Objectives

- To understand the functioning and business model of an influencer marketing agency operating in the EdTech space.
- To gain hands-on experience in creator discovery, evaluation, and selection for brand campaigns.
- To understand the end-to-end lifecycle of an influencer marketing campaign, from brand requirement to performance reporting.
- To develop skills in commercial negotiation, brand-creator coordination, and multi-campaign management.
- To build practical experience in maintaining and using structured campaign, creator, and financial data for tracking and reporting.
- To identify how data organisation and analytical thinking (developed through a CSE background) can add value to influencer marketing operations.
- To explore realistic, forward-looking applications of AI/ML and data analytics in the influencer marketing and creator economy domain.

4.5 Scope of the Project

The scope of the internship was limited to the influencer marketing operations vertical of Elite Creators Hub, specifically covering EdTech client campaigns. The work did not involve software development, application building, or machine learning model development; it was centred on marketing operations, creator/account management, and campaign data handling. Where this report discusses AI/ML applications (Section 4.9), these are presented explicitly as future possibilities and industry trends, and not as work completed during the internship.

The scope of day-to-day work included, but was not limited to, managing brand accounts, researching and shortlisting creators, negotiating and locking commercials, coordinating content deliverables between brands and creators, tracking live campaign links and statuses, and maintaining campaign, creator, and payout data using Google Sheets, across multiple simultaneous EdTech campaigns, including those involving ALLEN Career Institute.

4.6 Technologies and Tools Used

The tools used during the internship were primarily productivity, spreadsheet, and communication platforms rather than software development tools, reflecting the operational/marketing nature of the role. It is clarified that no software development, programming, or machine learning tools were used to build any system during this

internship; Section 4.9 separately discusses potential future technical applications, distinct from what was actually used.

Table 4.3: Tools Used and Their Purpose

Tool	Purpose / Use in Workflow
Google Sheets	Primary tool for maintaining campaign data, creator data, commercial tracking, and payout status.
Google Drive	Storage and sharing of campaign briefs, creator lists, and reference documents.
Instagram / YouTube (Platform Analytics)	Reviewing creator profiles, past content, follower counts, and engagement/reach indicators.
Email	Formal communication with brand stakeholders regarding campaign requirements and updates.
WhatsApp / Instagram DM	Day-to-day coordination and negotiation with creators.

4.7 System Architecture

This internship did not involve building a software system; accordingly, this section describes the operational / data-flow architecture within which the intern's work was carried out — i.e., how information moved between the brand, the agency, the creator, and the data-tracking layer — rather than a software or application architecture.

At a high level, brand requirements entered the system through the Account Management layer, which interfaced with a Creator Research & Evaluation layer (drawing on public creator/platform data) to identify suitable creators. Once creators were selected and commercials negotiated, records flowed into a central Data Management layer (Google Sheets), which maintained the authoritative record of campaign status, deliverables, live links, and payments, and which was referenced by both the Account Management and Reporting functions.

Brand Requirement	Account Management	Creator Research & Evaluation	Central Data Layer (Google Sheets)	Reporting to Brand
-------------------	--------------------	-------------------------------	------------------------------------	--------------------

Figure 4.2: Operational / Data-Flow Architecture of Campaign Execution

This architecture, while manual/operational rather than software-based, mirrors the conceptual structure of a simple information system: an input layer (brand requirements), a processing/decision layer (creator evaluation and negotiation), a central data store (the tracking sheets), and an output/reporting layer — a structure relevant to a CSE student's understanding of how real-world business processes can, in principle, be modelled and eventually automated (see Section 4.9).

4.8 Methodology

The methodology followed for executing each influencer marketing campaign during the internship consisted of an eleven-stage workflow, illustrated in Figure 4.3 and described stage-by-stage below.

Brand Req.	Planning	Creator Research	Shortlisting	Negotiation	Locking	Content Coord.	Approval	Publishing	Perf. Tracking	Reporting
------------	----------	------------------	--------------	-------------	---------	----------------	----------	------------	----------------	-----------

Figure 4.3: End-to-End Influencer Campaign Management Workflow

Table 4.4: Stage-wise Description of Campaign Workflow

Stage	Key Activity	Primary Owner
1. Brand Requirement	Brand shares objective, budget, timeline	Brand / Account Manager
2. Campaign Planning	Internal plan for creators and format	Account/Campaign Team
3. Creator Research	Identify niche-relevant creators	Intern / Account Team
4. Creator Shortlisting	Evaluate on engagement, reach, relevance	Intern / Account Team
5. Commercial Negotiation	Negotiate rates and deliverables	Intern / Account Team
6. Creator Locking	Finalise creator for campaign	Account Team
7. Content Coordination	Share briefs and guidelines	Account Team / Creator
8. Approval	Brand reviews and approves content	Brand
9. Publishing	Creator publishes approved content	Creator
10. Performance Tracking	Track live link and basic metrics	Account Team
11. Reporting	Compile and share campaign summary	Account Team

A distinguishing feature of the methodology was the need to manage multiple campaigns, each at a different stage of the above workflow, at the same time — which required maintaining clear, up-to-date records so that priorities (pending approvals, upcoming deadlines) could be identified quickly.

4.8.1 Data Management Methodology

For each creator considered for a campaign, profile information (platform, handle, niche, follower count, past collaboration history) was recorded and used as the base dataset for comparison. Engagement metrics, reach/views, and audience relevance were reviewed together — rather than follower count alone — to shortlist creators, particularly for EdTech campaigns where audience relevance to students/exam aspirants was prioritised.

Table 4.5: Data Fields Maintained in Campaign Tracking Sheets

Field	Description
Campaign Name	Identifier for the brand campaign
Creator Name / Handle	Name and social media handle of the creator
Platform	Instagram, YouTube, etc.
Niche	Content category of the creator
Engagement Rate	Interaction level relative to audience size
Deliverable	Agreed content format (video, integration, story, etc.)
Commercial (Rate)	Agreed payment for the deliverable
Status	Briefed / In Progress / Submitted / Approved / Published
Live Link	URL of the published content
Payment Status	Pending / Processed

4.8.2 Applied Example: EdTech Campaign Methodology (ALLEN Career Institute)

The general methodology above was applied, among other EdTech campaigns, to campaigns involving ALLEN Career Institute. In line with Elite Creators Hub's confidentiality policy, exact commercial figures and internal tracking sheets are not reproduced in this report; the case study below is therefore presented at a descriptive level.

Table 4.6: Case Study Summary – ALLEN Career Institute Campaign

Parameter	Details
Campaign Objective	To generate leads and maximise views for the brand
Target Audience	JEE and NEET aspirants
Creator Selection Criteria	Niche relevance to education/exam-preparation content, audience match, engagement, reach
Deliverables	YouTube and Instagram videos, with the exact format depending on individual brand requirements
Commercial Structure	Confidential – not disclosed in this report as per company policy
Tracking Method	Tracked internally on Google Sheets; the sheet itself is not reproduced here as per company policy
Challenges Encountered	Addressed through the general workflow safeguards described in Section 4.8.3, such as maintaining a backup creator pool and clear upfront briefs
Outcome	Maximised visibility for the brand across YouTube and

Parameter	Details
	Instagram

4.8.3 Challenges Encountered in Applying the Methodology

Table 4.7: Challenges and Corresponding Solutions

Challenge	Approach / Solution
Managing multiple campaigns simultaneously	Structured, up-to-date tracker in Google Sheets with clear status labels
Creator unavailability or delayed responses	Maintained a backup pool of relevant creators per campaign
Negotiating commercials within budget constraints	Compared creators on reach/engagement value within budget
Content approval delays between brand and creator	Proactive follow-ups and clear upfront briefs

4.9 Expected Outcomes

The internship was expected to, and did, build practical skills in account management, creator evaluation, negotiation, and structured data handling, while providing exposure to how a real influencer marketing agency operates in the EdTech space. The outcomes achieved are summarised below.

Table 4.8: Skills Gained Mapped to B.Tech Curriculum Concepts

Skill Gained During Internship	Related CSE Concept
Structuring data in spreadsheets	Data organisation, database/table design principles
Comparing creators on multiple parameters	Multi-criteria evaluation, feature-based comparison
Tracking campaign status across stages	State/status tracking, workflow modelling
Identifying patterns in engagement data	Foundational data analysis thinking
Managing multiple concurrent campaigns	Task scheduling / prioritisation logic

Beyond these operational skills, the internship also produced a clearer, evidence-based view of where AI/ML and data analytics could realistically be applied in this domain in the future. It is emphasised that none of the systems listed below were built during this internship — they are forward-looking outcomes/possibilities identified as a result of the operational exposure gained.

Table 4.9: Potential Future AI/ML Applications and Their Relevance

Potential Future Application	Relevance to Observed Workflow
AI-based creator recommendation	Automates the currently manual creator research/shortlisting stage
Creator-brand matching model	Improves audience-relevance assessment during shortlisting
Campaign performance prediction	Supports data-driven creator and budget decisions
Automated reporting	Reduces manual effort in compiling campaign summaries
Sentiment analysis	Adds qualitative depth to engagement-based performance tracking
NLP-based content analysis	Improves accuracy of creator niche/content classification
Marketing analytics (cohort/attribution)	Supports strategic, cross-campaign decision-making
Automated creator discovery & tracking	Reduces manual research and spreadsheet update effort

Overall, the internship is expected to serve as a foundation for exploring data-driven or automation-oriented work in the marketing technology (MarTech) space in the future, while having already delivered practical, transferable skills in communication, negotiation, project management, and structured data management.

4.10 Certificates of Completion and Other Communication Mail Proof

The Internship Completion Letter issued by Elite Creators Hub (ECH), dated 02/09/2026 and signed by the Director, Mr. Ayush Khandelwal, is attached earlier in this report (see Internship Completion Certificate). The Offer Letter and the corresponding email communication confirming the internship are attached below as further evidence. In line with the organisation's confidentiality policy, internal campaign tracking sheets and detailed commercial/payout figures beyond what is stated in the Offer Letter are not reproduced in this report.

4.10.1 Offer Letter

4.10.2 Communication Proof (Offer Letter Email)

The screenshot below shows the original email from Elite Creators Hub through which the Offer Letter was shared and the internship was formally communicated.
